

seeks to increase parent involvement in their child's education.

Out of her passion for teaching and her love for children, Nicole Mayhew sets high standards for all of her students and works with them to achieve their individual goals and the desired results of the overall academic performance of the class. She is the positive force behind each student's growth of mind, by giving them the confidence, knowledge, and inspiration needed to succeed.

The Teacher of the Year recognition highlights one year of teaching, but the proof of greatness lies well beyond the title—it lies in the hearts and minds of the students who have been deeply affected. Through her hard work and dedication, the impact she has had on her students and the community has proven her to be among the great teachers in Northwest Florida, and Santa Rosa County is honored to have her as one of their own.

Madam Speaker, on behalf of the U.S. Congress, I am proud to recognize Nicole Mayhew on this outstanding achievement and her exemplary service in the Santa Rosa County School District.

CONGRATULATIONS TO SOUTH FLORIDA'S HOLOCAUST DOCUMENTATION AND EDUCATION CENTER

HON. KENDRICK B. MEEK

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 2007

Mr. MEEK of Florida. Madam Speaker, I rise to honor and pay tribute to all victims of the Holocaust and to congratulate South Florida's Holocaust Documentation and Education Center, its founders and museum curators for their fine work in educating and reminding the public about the Holocaust and remembering and honoring its victims.

An important part of the Center's permanent exhibits is one of only eight authentic World War II railcars that transported Jews from the Warsaw Ghetto to the Nazi death camps.

An estimated 3 million Jews were packed into the cars like the one on display in Hollywood, FL, which has a faded swastika still painted on the side. The persecuted Jews were often kept inside for days without food or water before being murdered. This railcar was used during the world's darkest time when over 6 million Jews were murdered along with approximately 3 million more victims of Nazi aggression, including; Christian Poles, Gypsies, Jehovah's Witnesses, homosexual men, and people with disabilities.

This railcar will be placed on an unused track near the Holocaust Museum, which is located in my district at 2031 Harrison Street in Hollywood, FL, the center of the second-largest population of Holocaust survivors in the Nation.

To the residents of South Florida, the students enrolled in area schools, and to the millions of visitors to the region, I encourage you to visit the Holocaust Documentation and Education Center to study, understand and contemplate the consequences of man's inhumanity to man which occurred in Europe prior to and during World War II.

That the Holocaust Documentation and Education Center is one of four Holocaust muse-

ums in the country where these railcars are on display demonstrates that the Jewish community in South Florida is among the strongest in the Nation, forever committed to preserving the memory of the 6 million Jews who tragically were killed during the Shoah.

This railcar will undoubtedly serve as a reminder for eternity that the poignant expression "Never Again" will never ring hollow again.

I congratulate the Holocaust Documentation and Education Center for attaining and displaying this railcar, and for helping to teach the entire South Florida community lessons of tolerance and understanding.

STATEMENT RECOGNIZING FEBRUARY AS NATIONAL MARFAN AWARENESS MONTH

HON. GARY L. ACKERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 2007

Mr. ACKERMAN. Madam Speaker, I rise today in observance of February as National Marfan Awareness Month and to recognize the hundreds of thousands of Americans who are living with Marfan syndrome and related connective tissue disorders.

I am proud that the Nation's premier organization supporting the Marfan syndrome community, the National Marfan Foundation, is headquartered in my congressional district in Port Washington, NY. The NMF was founded 25 years ago by Priscilla Ciccariello, a woman of enormous compassion and vision. For the past quarter-century, the NMF has been dedicated to saving lives and improving the quality-of-life for Marfan patients through research, support services, education, and advocacy.

This year marks the 16th observance of National Marfan Awareness Month which is designed to educate the general public and healthcare providers about this challenging condition. Marfan syndrome is a genetic disorder of the connective tissue that can affect many body systems, including; the skeleton, eyes, heart, nervous system, lungs and blood vessels. Of primary concern to patients is the impact the syndrome can have on the aorta. In Marfan patients, the aorta (the large artery that carries blood away from the heart) is weakened and prone to enlargement and rupture, which is often fatal. Currently, there is no cure for Marfan syndrome but with early diagnosis, proper treatment and careful management, patients can live a normal lifespan.

Madam Speaker, I am pleased to inform the House that we are at an unprecedented time of hope in the field of Marfan syndrome research. Just last month, the National, Heart, Lung and Blood Institute at the National Institute of Health, working closely with NMF, initiated a groundbreaking clinical trial on Marfan syndrome. This trial seeks to determine the efficacy of a medication currently used to control high-blood pressure for treating aortic growth in children with Marfan syndrome. The blood-pressure medication has shown a remarkable ability to halt and even reverse aortic growth in pioneering basic research conducted by Dr. Hal Dietz of the Johns Hopkins University School of Medicine. I applaud NHLBI Director Dr. Elizabeth Nabel, and Dr. Gail Pearson, Chief of the NHLBI's Heart Development and

Structural Diseases Branch, for their leadership in supporting this promising trial.

Madam Speaker, February was chosen as National Marfan Awareness Month in part to coincide with Abraham Lincoln's birthday. President Lincoln is believed to have been affected by Marfan syndrome based on the many outward signs of the disorder he portrayed. Marfan syndrome patients are frequently taller than non-affected members of their family and have disproportionately long limbs, fingers and toes. In addition, they often have an indented or protruding chest-bone, curved spine, high-arched palate, and loose joints. Other well known individuals who were afflicted with the Marfan syndrome include Jonathan Larson, the Tony Award winning playwright of the Broadway musical Rent, Flo Hyman, captain of the U.S. Olympic volleyball team that won a gold medal in 1984, Charles de Gaulle, the composer Sergei Vasilievich Rachmaninoff, and Mary, Queen of Scots.

According to the Centers for Disease Control and Prevention, approximately 14,000 people die each year of aortic aneurysms and dissections, 20 percent of which can be contributed to genetic disorders such as Marfan syndrome. Unfortunately, a lack of awareness about Marfan syndrome continues to result in patients dying before being properly diagnosed and treated. Madam Speaker, I encourage my colleagues to join me and the National Marfan Foundation in raising awareness of this life-threatening disorder so we can prevent future unnecessary tragedies.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

SPEECH OF

HON. JERRY MCNERNEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 12, 2007

Mr. MCNERNEY. Mr. Speaker, I rise in proud support of H.R. 798, which will instruct the General Services Administration to install photovoltaic panels on the roof of the Department of Energy in Washington D.C.

As a country, our energy needs continue to grow, and yet we are still heavily dependent on foreign sources of oil. The Federal Government is the country's single largest energy consumer and is in a unique position to demonstrate a commitment to taking on the challenge of global warming through the use of sustainable energy technology.

The installation of photovoltaic panels on the roof of the Energy Department headquarters in Washington D.C. is a first—and important—step in that direction. Doing so will help demonstrate the power and promise of solar energy.

It is critical that we continue to push forward on this front and expand the menu of renewable energy solutions available for use. I have recently formed the Bipartisan Freshman Caucus on Energy and Climate and am committed to working with members on both sides of the aisle to move forward with more common-sense solutions like photovoltaic panels. I urge my colleagues to do the same.
